Document Control and Contents

Use the latest controlled copy available in the portal.

Field	Value	Field	Value
Document title	Smart DMS Portal User Manual	Document number	DMS-UM-001
Revision	1.0	Effective date	29-Jul-2026
Prepared for	ZF Rane Automotive India PVT LTD - SGD	Classification	Internal user guide
System	Smart DMS v2.0.0	Source	Portal UI, project SOP and reference deck

Contents

1	Document control and contents	2	6	Approvals and status tracking	10-13
2	Purpose, scope and access levels	3	7	Document library and repositories	14-16
3	End-to-end process overview	4	8	Reports and revision control	17-18
4	Login and account access	5-6	9	Archive, audit and people administration	19-21
5	Dashboard and document submission	7-9	10	Notifications, profile, logout and troubleshooting	22-24

Controlled-copy rule

Screenshots are representative of the current portal. Field availability and administrative actions may vary by role, QMS level and configured library category.

2.0

Purpose, Scope and Access Levels

This manual enables users to complete routine DMS work safely and consistently.

Purpose

Provide a practical guide for login, upload, approval, document access, reporting, audit review and secure logout.

Scope

Applies to portal users, L2 first approvers, L1 final approvers, managers, supervisors and administrators.

Level / role	Primary access	Approval responsibility
L1 - HOD / final approver	All QMS files; final review; edit/delete rights where configured.	Approve or reject after L2 review. Admin is treated as L1.
L2 - Assistant Manager / Manager	All QMS files and first-stage review workspace.	Review, select recipients and send to L1; or reject with comments.
L3 - Procedure viewer	SOPs, plans, checklists and other reports.	No approval decision.
L4 - Checksheet viewer	Checklists and checksheets only.	No approval decision.
High-level roles	Admin, Manager, Supervisor and Approver can access Archive and System Log.	Decision rights still follow QMS level.
Admin	Full system access including People directory.	Final approval capability and user oversight.

Key distinction

Role controls administrative pages. QMS level controls document visibility and who can complete each approval stage.

3.0

End-to-End Process Overview

The workflow below reflects the current two-stage approval design.

Status path

Pending -> Pending Final Approval -> Approved. A rejection can occur at either approval stage and must include comments so the uploader knows what to correct.

4.1

Login to the Portal

Use the portal URL supplied by your DMS administrator.

Figure 1 - Current Smart DMS login page

- 1 Open the Smart DMS portal**
Use a supported browser and the approved internal URL.
- 2 Enter your identity**
Use your registered email address or employee GENID.
- 3 Enter your password**
Passwords are case-sensitive. Do not share credentials.
- 4 Select Sign in**
Successful login opens the Master Dashboard. An audit event is recorded.

Access problem?

Use Forgot password for a registered email address or contact the DMS administrator if the account is not active.

4.2

Register and Reset Password

New accounts start with the User role and standard QMS access.

Figure 2 - Create account and Forgot password entry points on the current login page

1 Open Create account

From the login page, select Create account.

2 Complete identity fields

Enter full name, optional employee ID, plant, official department and a unique email.

3 Create a password

Use at least 8 characters and enter the same value in Confirm password.

4 Submit the registration

Return to the login page after the success message. An administrator manages any elevated role or QMS-level assignment.

Forgot password

Select Forgot password on the login page, submit the registered email and follow the time-limited reset link. Reset links expire after 1 hour.

5.1

Use the Master Dashboard

The dashboard is the main operational view for documents, filters and quick actions.

Figure 3 - Dashboard summary, quick actions and filters

1 Review summary cards

Check total, pending, approved and archived document counts.

2 Use quick actions

Open Upload Documents, Pending Items, Document Library or Graphics Report.

3 Search and filter

Filter by text, plant, department, customer and approval status.

4 Open a document

Use row actions to view, download or bookmark. Deletion is restricted and moves the item to Archive.

5 Export the current view

Use CSV export when a filtered list is required for offline review.

Good practice

Reset filters before concluding that a document is missing. Status and department filters can hide valid records.

5.2

Upload Files and Enter Metadata

Every upload is routed into the Document Library and sent for approval.

Figure 4 - File selection and the start of the upload form

1 Select one or more files

Drag files into the drop zone or choose Browse files.

2 Check format and size

Accepted formats: PDF, DOC/DOCX, XLS/XLSX and PPT/PPTX. Maximum size is 100 MB per file.

3 Enter the document number

Use the approved numbering convention, for example DOC-2026-001.

4 Confirm revision

Enter the revision value. If left blank, the system uses Rev.00.

5 Select ownership

Confirm plant and department. Choose a customer or enable Internal Document.

Before upload

Remove passwords from files intended for browser preview and confirm the file name does not expose confidential personal data.

5.3

Choose the Library Path and Submit

The selected category and folder determine where users find the approved document.

Drag and drop or click to browse. PDF, Word, Excel, PowerPoint — max 100 MB each. All uploads go to the Document Library and require approval.

Drop files here
or [browse files](#)

Accepted: .pdf - .docx - .xlsx - .pptx - .doc - .xls - .ppt

2 Document details and library path
Select the exact Document Library folder. Every upload is sent for approval.

👤 Diva Chandra 📁 EMP001 🏠 P1 - Trichy Plant

📁 QAD - Quality Assurance Department

Document Number Revision Number

- File is stored**
Your document is saved with all metadata attached.
- Approver is notified**
An email with a review link is sent to the approver.
- Status updates**
You'll see Pending → Approved or Rejected in the dashboard.

Tips

- Use a consistent document number format, e.g. DOC-2026-001
- Select the correct customer so filtering works later.
- Group related files in one submission when possible.

Figure 5 - Current upload workflow; continue down the form to set the library path and submit

- 1 Select the category**
Choose the correct library category, such as QMS.

- 2 Choose document type and folder**
Complete every path field until the path indicator shows the exact destination.

- 3 Add a revision summary when needed**
Enable the summary option when replacing or revising an existing controlled document.

- 4 Review all details**
Verify file, document number, revision, plant, department, customer and library path.

- 5 Submit for approval**
The document is stored with status Pending, the L2 reviewer is notified and the action is logged.

Required path

Do not submit against a broad category when a lower-level folder is required. Incorrect placement makes controlled documents difficult to retrieve.

6.1

Find Documents in Pending Items

All logged-in users can view the approval list; decision rights depend on QMS level.

Figure 6 - Pending Items list with status filters and review actions

- 1 Choose a status tab**
View All, Pending, Pending Final Approval, Approved or Rejected items.

- 2 Search the list**
Search by file name, document number or uploader.

- 3 Open Review**
Inspect the file preview, metadata and current approval stage.

- 4 Export when required**
Download the filtered list as CSV for controlled reporting.

No bulk decisions

Approvals must be reviewed individually because the workflow requires stage-specific review, recipient selection and comments.

6.2

Review the Document Before Deciding

Review the file and metadata together before completing an approval action.

Figure 7 - Approval review workspace with preview and document details

- 1 Confirm document identity**
Check file name, document number, revision, plant, department, customer and category.
- 2 Inspect the preview**
Open or download the source file when an inline preview is unavailable.
- 3 Check revision context**
Read the revision summary and compare with the previous approved version when applicable.
- 4 Confirm the current stage**
Pending requires L2 action. Pending Final Approval requires L1 or Admin action.
- 5 Record a clear decision**
Follow the correct stage procedure on the next page.

Review standard

Never approve from the list view alone. Open the review page and verify the actual file content.

6.3

Complete the Two-Stage Approval

Approval responsibility is assigned by QMS level, independent of general role.

L2 - First-stage review

- 1 Verify document accuracy and library placement.
- 2 Choose the recipients or department heads who should receive the final approved document.
- 3 Select First Approve to move the item to Pending Final Approval.
- 4 Or select Reject and enter a clear correction comment.

L1 - Final review

- 1 Confirm the L2 review and selected recipients.
- 2 Verify the final content, revision and controlled-document location.
- 3 Select Approve to publish the final status and notify stakeholders.
- 4 Or select Reject and enter a mandatory rejection comment.

Status	Meaning	Next action
Pending	Awaiting L2 first review.	L2 reviews and first approves or rejects.
Pending Final Approval	L2 review completed.	L1/Admin approves or rejects.
Approved	Final approval completed.	Document is available for controlled use.
Rejected	Correction is required.	Uploader corrects and resubmits as required.

Mandatory rejection comments

State what is wrong, where it occurs and what the uploader must change. Avoid comments such as 'incorrect' without detail.

6.4

Track Approval Progress

The timeline shows the current stage and completed workflow events.

Figure 8 - Track Approvals summary and document timelines

- 1 Start with My submissions**
Standard users see documents they uploaded.
- 2 Use All documents when authorized**
High-level users can switch scope to review all records.
- 3 Filter by status or search**
Narrow the list to pending, approved or rejected documents.
- 4 Read the timeline**
Each marker shows submission, first approval, final approval or rejection.
- 5 Open the source record**
Use the linked document or review action when follow-up is required.

Status interpretation

A green timeline is complete. A red marker identifies rejection. A neutral future marker means that stage has not yet occurred.

7.1

Browse the Document Library

The library organizes controlled content by category and access hierarchy.

Figure 9 - Document Library category browser

- 1 Open Document Library**
Use the left navigation menu.
- 2 Choose a category**
Select QMS, Customer Procedures, Standard Manuals, Awards and other configured categories.
- 3 Drill into the hierarchy**
Choose the required QMS level, document group, plant, department or subfolder.
- 4 Open the file**
View inline when supported or download the approved source file.
- 5 Use your access level correctly**
L3 is limited to procedure-related groups; L4 is limited to checklists and checksheets.

Controlled use

Use the document from the library instead of a locally saved copy when the latest revision is required.

7.2

Open Procedures and Standard Manuals

Category cards provide a shorter route to frequently used controlled documents.

Figure 10 - Procedure category cards

Figure 11 - Standard Manual category cards

- 1 Select the entry card**
Open the required procedure or manual family.
- 2 Choose plant and department where shown**
Use the repository hierarchy to reach the correct controlled location.
- 3 Select the document**
Open the approved file and confirm its revision before use.
- 4 Return through breadcrumbs**
Use the page breadcrumb or category browser to move back without losing context.

If a card is empty

Confirm your QMS access level and selected plant/department. Then contact the document owner if the file is still unavailable.

7.3

Use Plant and Customer Repositories

Use these views when the retrieval question begins with a plant, department or customer.

Figure 12 - Plant-based Master Records

Figure 13 - Customer Records

- 1 Master Records**
Choose a plant, then a department, and open the required controlled record.

- 2 Customer Records**
Choose the customer card, review the available files and open the required record.

- 3 Confirm context**
Check the plant, department, customer, document number and revision before use.

- 4 View only**
These repository pages are for retrieval. Use Upload Documents to submit new controlled files.

Search strategy

Use the dashboard for broad metadata search; use repository pages for structured browsing by ownership.

8.1

Read the Graphics Report

Charts summarize approval health, ownership and upload activity.

Figure 14 - Graphics Report summary cards and charts

1 Review KPI cards

Check total, approved, pending, rejected and recent upload counts.

2 Read status distribution

Use the doughnut chart to identify approval backlog and rejection volume.

3 Compare ownership

Use plant, customer and department charts to locate concentration or imbalance.

4 Review upload trend

Use the time-series chart to identify peaks and changes in submission volume.

Reporting caution

Charts reflect the current database and active filters. Use exported lists or System Log for record-level audit evidence.

8.2

Review Revision History

Revision History records what changed, who changed it and where the document belongs.

The screenshot shows the 'Revision History' page under the 'REPORTS' section. It includes a title 'Revision History' and a subtitle 'Track document revisions across plants and departments.' Below this are two dropdown menus for 'All plants' and 'All departments', followed by 'Apply' and 'Reset' buttons. A pagination bar shows 'Showing 1–2 of 2', 'Per page' set to '10', 'Page 1 of 1', and 'Prev'/'Next' buttons. A table with the following columns is displayed: DATE, FILE NAME, REVISION, REVISED BY, PLANT, DEPARTMENT, CHANGE SUMMARY, and PREVIOUS. The first row of the table shows 'Digit aliza' in the FILE NAME column and 'overall' in the CHANGE SUMMARY column.

Figure 15 - Revision History list and filters

1 Filter the history

Select plant and department, then apply the filter.

2 Identify the document

Use file name, document number and revision number.

3 Review ownership

Confirm the person, plant, department and revision date.

4 Read the change summary

Use the recorded summary to understand what changed between revisions.

5 Open the current approved file

Use the Document Library for the controlled version currently in force.

Revision discipline

Use a meaningful summary such as 'Updated torque specification in Section 4' rather than 'new version'.

9.1

Manage Archived Documents

Archive is restricted to Admin, Manager, Supervisor and Approver roles.

SYSTEM

Archive

Soft-deleted documents are stored here. Review before permanent removal.

Documents here were removed from the dashboard. Permanently deleting cannot be undone.

Showing 1–10 of 10

Page 1 of 1

← Prev

Next →

DELETED DATE	FILE NAME	DEPARTMENT	UPLOADED BY	STATUS	ACTION
	cv at_ vs _m				

Figure 16 - Archive list with retained document metadata

1 Understand soft delete

Removing a document from the dashboard moves its record to Archive instead of immediately erasing it.

2 Locate the archived item

Use the list, pagination and record metadata.

3 Retain for audit

Keep archived records when the retention period or investigation is still active.

4 Permanently delete only when authorized

Permanent deletion removes the archived record and is logged.

Destructive action

Confirm retention requirements and the exact document before permanent deletion. This action cannot be reversed through the portal.

Internal user guide - controlled copy when viewed in the DMS portal

Smart DMS v2.0.0

9.2

Use the System Log for Audit

System Log is available to high-level roles and records significant user actions.

The screenshot displays the 'System Log' interface. At the top, there's a 'SYSTEM' header and a title 'System Log' with a subtitle 'Full audit trail — every significant user action is recorded here.' Below this is a row of action filters: All (selected), Login, Logout, Register, Upload, Approval Email, Approved, Rejected, View, and Delete. A pagination bar shows 'Showing 1–10 of 454', 'Per page 10', 'Page 1 of 46', and navigation buttons for 'Prev' and 'Next'. The main table has columns: TIMESTAMP, USER, EMAIL, ACTION, DETAILS, and IP ADDRESS. Two rows are visible, both showing 'LOGIN' actions by 'Diva Chandra' at 'diva@example.com'.

TIMESTAMP	USER	EMAIL	ACTION	DETAILS	IP ADDRESS
2026-07-29 14:33:34	Diva Chandra	diva@example.com	LOGIN	User logged in.	
2026-07-29 11:22:22	Diva Chandra	diva@example.com	LOGIN	User logged in.	

Figure 17 - System Log with action filters

- 1 Choose an action filter**
Filter login, logout, upload, view, delete, approval, rejection, email and password events.
- 2 Review who and when**
Confirm timestamp, user name, employee ID or email and action type.
- 3 Read the details**
Use the details field to identify the affected document or activity.
- 4 Preserve audit context**
Capture the filtered result or export supporting records according to local audit practice.

Audit principle

Use System Log as the activity trail; use Revision History for version changes and Track Approvals for workflow progress.

9.3

Review People and Access Assignments

The People page is restricted to Admin users.

Figure 18 - People directory; sample personal details obscured

1

Review level counts

Confirm the number of L1, L2, L3 and L4 users.

2

Search or filter

Filter by name, email, employee ID, department, role or QMS level.

3

Verify assignments

Ensure L1 and L2 approvers are current and aligned with the approved responsibility matrix.

4

Correct access through the approved admin process

Do not share accounts or use another user's approval privileges.

Least privilege

Assign only the role and QMS level required for the user's current responsibility. Review access when a person changes role or department.

10.1

Use In-Portal Notifications

Notifications highlight uploads, required approvals, decisions and other events.

Figure 19 - Notification panel opened from the top bar

1 Open the bell icon

The badge shows unread notifications.

2 Select a notification

Use the linked item to open the related document or approval.

3 Mark items as read

Clear individual notifications or use Mark all read.

4 Use email as a secondary channel

Approval and decision emails supplement the in-portal notification; the portal remains the source of truth.

If email is delayed

Check the notification panel and Track Approvals. Report repeated email failures to the DMS administrator.

10.2

Maintain Your Profile and Sign Out

Keep personal details secure and end the session when work is complete.

Figure 20 - Profile and activity page; sample personal details obscured

- 1 Review account details**
Confirm name, employee ID, plant, department, role and QMS level.
- 2 Update the profile image if required**
Use an approved JPG, PNG, GIF or WebP image.
- 3 Change password securely**
Enter the current password, then a new password of at least 8 characters.
- 4 Review My Activity**
Use the personal activity list to identify unexpected access or actions.
- 5 Sign out**
Select Sign out in the top-right corner. The session is cleared and the login page reopens.

Shared workstation rule

Always sign out before leaving the workstation. Closing only the browser tab may not be sufficient on a shared device.

10.3

Best Practices and Troubleshooting

Use this page as a quick operating checklist.

Before submission

- Use the approved document-number format.
- Verify revision, plant, department and customer.
- Choose the exact library path.
- Add a specific revision summary.
- Open the final file before upload.

Before approval

- Review the actual file and metadata.
- Confirm the current approval stage.
- L2 selects final recipients.
- L1 completes the final decision.
- Rejection comments must be actionable.

Issue	Check	Action
Cannot sign in	Email/GENID, password case and account status.	Use Forgot password or contact Admin.
Upload blocked	File type/size and all required metadata/path fields.	Correct the field marked in the form and retry.
Cannot approve	Document stage and your QMS level.	L2 handles Pending; L1/Admin handles Pending Final Approval.
Document not found	Filters, QMS access and library path.	Reset filters, browse the correct category, then contact owner.
Preview unavailable	File format and browser support.	Use the authorized download/open action.
Email not received	Notification panel and Track Approvals.	Continue in portal and report repeated email failures.

Support information to provide

Share the page name, document number, time of issue, your role/QMS level and the exact error message. Do not send passwords or confidential file content in support messages.

End of controlled user manual
