

# Smart DMS Documentation

Smart DMS is the current Flask-based document management portal used for document upload, approval, library browsing, records access, reporting, and audit logging.

## What the app does

Supports user login with email or employee ID (GENID)

Allows document upload with metadata and approval workflow

Provides a dashboard for search, filtering, status tracking, bookmarks, and recent documents

Includes approval review pages for first-stage and final-stage review

Offers document library browsing, procedures, plant records, and customer records

Includes revision history, archive, system log, notifications, and profile management

## Current modules

Authentication: login, registration, password reset, logout

Dashboard: searchable document overview and exports

Upload: guided upload with category and library folder selection

Approvals: review and decision workflow with secure review links

Document Library: category-based browsing for reference documents

Procedures: management, customer, support, and plant procedure sections

Tracking and Notifications: approval tracking and in-app notifications

Reports: graphics report, revision history, archive, and system log

Profile and People: user directory and profile management

## Run locally

```
`powershell
```

```
python -m venv venv
```

```
.\venv\Scripts\Activate.ps1
```

```
pip install -r requirements.txt
```

```
python app.py
```

```
`
```

Open <http://localhost:5001>

## Main routes

/login or /

/register

/forgot-password

/reset-password/

/dashboard

/upload

/approvals

/document-library

/procedures

/plant-assets  
/customer-records  
/graphics-report  
/revision-history  
/archive  
/system-log  
/people  
/profile

## **Current access model**

User: can sign in, upload documents, and view dashboard content

Approver: can review documents and make approval decisions

Supervisor / Manager / Admin: have broader oversight and admin-facing access

## **Storage and data**

Main database: smart\_dms.db

User credential database: data/smart\_dms\_users.sqlite3

Uploads folder: uploads/

## **Notes**

The app works with SQLite by default and can be configured for MySQL through the environment settings.

If the database is empty, the app falls back to mock data for demonstrations.

Mail and reset links depend on the configured SMTP settings.
